

Computer Training

Mastering MS Access Development

*It's the Trainer that makes the
training, not the training company!*

*Trust your training to an
experienced, professional trainer.*

Ron DeGrand
MS Access Development
Experience Since 1992

3-DAY MS ACCESS DEVELOPMENT CLASS

Developing databases using MS Access is a fairly easy process versus other Database Management System programs. However, creating a well-designed database application takes training from a professional developer.

This intense, 3-Day course walks you through the total design process to not only teach you the fundamentals in database design but also advanced techniques necessary for robust application development.

At the end of the course, you will be able to create well-designed database, recognize the flaws in current databases and how to fix them, and possess the tools to help others create or maintain company-wide databases.

Prerequisites

A working knowledge of MS Access or another database management program; IT personnel who have to support MS Access databases; power users of the MS Office line of programs wanting to learn more about MS Access Development.

ABOUT CAS

- * Developing databases since 1983
- * MS Access Development since 1990.
- * More cost-effective than using an employee or another development company.
- * Well-versed in a variety of business areas, departments within companies, and processes in those departments.
- * Not only develop databases using MS Access, but have trained companies in its use as well as written manuals and run user groups .
